Control the robotic fish

You can control the bionic robot with your smartphone, tablet, or computer using a web browser.

1. Open the WIFI settings window on your device.
2. From the WIFI list, locate and connect to "b4e_xx_xx_xx_xx_xx_xx" (where xx represents the static WIFI network name for your microcontroller) using the password "education".
3. Once connected, launch a browser window from your device.
4. Look for any URL with http://www (important: it should not be https://www). Sometimes you may have to delete your browser history.
5. The web page opens. From the menu list, select the robot you would like to control.
6. Drag to move the Speed, Direction, and Swing sliders. Depending on the robot you selected, these sliders control the different servo motors and/or motor functions.
